

New Events Related to Local Rule S.D.Ind. B-7069-1 (WO 5746) [All Users]

The following events are now available for use in the execution or enforcement of judgments: Motion for Writ of Execution and Motion for Proceedings Supplemental.

Amended Omnibus Objection to Claims (WO 5850) [All Users]

The Omnibus Objection to Claims event was not set up to display docket text correctly for amended omnibus objections. The event has been reworked and docket text will now display the correct text for amended omnibus objections.

Awaiting Closing Status (WO 5856) [Court Users]

The Awaiting Closing status is set from certain events and is used by the Cases Ready for Closing Report. After a review of events that set the status, it was determined that the status was not needed if a closing deadline (e.g., close dismissed case, close case, etc.) was also set. Setting the status when a closing deadline was also set caused the related case to display prematurely on the report, and case managers would have to terminate the status to remove the case from the report. The Awaiting Closing status has been removed from any event that sets a closing deadline which will prevent cases from displaying on the Cases Ready for Closing Report prematurely.

Auto-Termination of Objection Deadlines (WO 5265) [Court Users]

An objection deadline set from a motion or notice event should be auto-terminated when the related order is entered, but some order events were not set up to do so. The dispatches which control the order events have been updated to always auto-terminate related objection deadlines.
