

Certificate of Service Event (WO 5551) [All Users]

This event has been simplified, and screens are presented based on what event the certificate of service is related to. Docket text now includes the summary text of the related event instead of asking users to add their own descriptions. The only exceptions are when a user indicates that a certificate of service was filed per Local Rule, in which case the Local Rule cite is added to docket text.

Recipient List and Local Forms re: Bug Fix (WO 6021) [Court Users]

Some local forms generated the Recipient List, which made it appear that the form had been sent to the BNC, although local forms never go to the BNC. All affected local forms have been updated to prevent the Recipient List from displaying inappropriately.

Spread Text Bug Fix (WO 6020) [Court Users]

When adversary orders concerning debtor discharges are docketed, the orders are spread to the bankruptcy case and the related document number is changed to a link to the adversary proceeding. The adversary proceeding numbers were formatted incorrectly in docket text when the orders were docketed from E-Orders, and the incorrect formatting caused the Notice of Reinstated Discharge form to fail. The bug has been fixed and all entries spread from an adversary to a bankruptcy docket contain the correctly formatted adversary proceeding number.
